Training the GIS Professional

Get Started with Insights for ArcGIS
- 1 day

Overview

Discover Drag-and-Drop Data Discovery and Analytics.

This course prepares you to work with Insights for ArcGIS to dynamically visualize and analyse data from multiple sources on maps, charts, tables, and more. You will learn how to define a workflow to investigate a spatial problem, interactively apply analysis tools, and share your insights across the enterprise.

Who should attend

- GIS Analysts
- GIS Technical Leads
- GIS Managers

Goals

- Connect to data sources and prepare data for analysis
- Visualise, interact with, and analyse multiple datasets
- Share analysis results and workflow models

Topics Covered

- Introduction to ArcGIS Insights. Insights for all analysts. ArcGIS Insights overview. Approaches to scientific inquiry. Data sources.

- Adding and displaying data. Location field type. Enabling location. Table relationships. Styling data.

- Exploring and visualising. Field types. Chart types. Using charts to answer questions. Selecting and filtering data.

- Spatial analysis. Analysis capabilities.

- Sharing your insights. What can you share. Sharing your work.

Prerequisites

Some familiarity with GIS concepts may be helpful. Completion of An Introduction to ArcGIS Pro for GIS Newcomers or equivalent knowledge is recommended but not required
