

Report Builder for ArcGIS Foundation- 4 Hours

Overview

Build eye-catching reports for your data in ArcGIS.

Producing reports using the out-of-the box tools available in ArcGIS Online is difficult without putting in a lot of time writing your own code. Report Builder for ArcGIS solves this problem by providing a design environment for producing virtually any type of report in your browser, from simple one-page factsheets to complex, multi-page area profiles.

To find out more about Report Builder please visit [our product page](#).

Who should attend

Data analysts or GIS professionals in the private sector and government agencies who need to generate compelling reports based on quantitative or qualitative attribute datasets stored in the ArcGIS system.

Topics Covered

- Examples. How can reports be applied to different use cases. How to access. Home page.
- Creating a new report. The different data sources available. Choosing a layer. Setting code and name fields.
- Adding widgets to the report. Changing layout and dimensions. Anchors. Margins.
- Configuring widget settings: Table; Bar Chart; Line Chart; Pie Chart; Scaled Icon Infographic; Filled Icon Infographic; Time Series Table; Text; Text Box; Break/Line; Web Map
- Report settings, style settings and page settings. Fonts and colours. Adding, deleting and ordering pages.
- Viewing and sharing a report. Embedding in a website.
